

ANTIVIRAL

Laminates and Compacts

SURFORMA® ANTIVIRAL

Laminates and Compacts

The best of tradition and innovation

An increased awareness of the problems associated with microbes has led Surforma to develop and introduce this more hygienic and high performance new product to its range.

Surforma® has harnessed the power of an antimicrobial additive and introduced it into the manufacturing process, providing the surface with enhanced protection.

Effective against a broad spectrum of microbes, ANTIVIRAL HPL & CGS by Surforma reduces the growth of virus and bacteria, providing a more hygienic surface and protecting consumers against their potentially negative effects.

When properly maintained, the protection will last for the expected life of the treated product and will help to reduce cross-contamination.

Antimicrobial

Microbe: Generic term for microscopic organisms that are too small to be seen with naked eye

Antibacterial

Example of bacteria: *Escherichia coli*, *Legionella pneumophila*, *Mycobacterium tuberculosis*, *Streptococcus pneumoniae*, etc...

Standard: Test method ISO 22196:2001; criteria Japanese regulation JIS Z 2801.

Antifungal

Examples of fungi: *Cladosporium*, *Serpula lacrymans*, *Tinea pedis*, *Stachybotrys chartarum*, etc...

Standard: ASTM G21: 2015

Antiviral

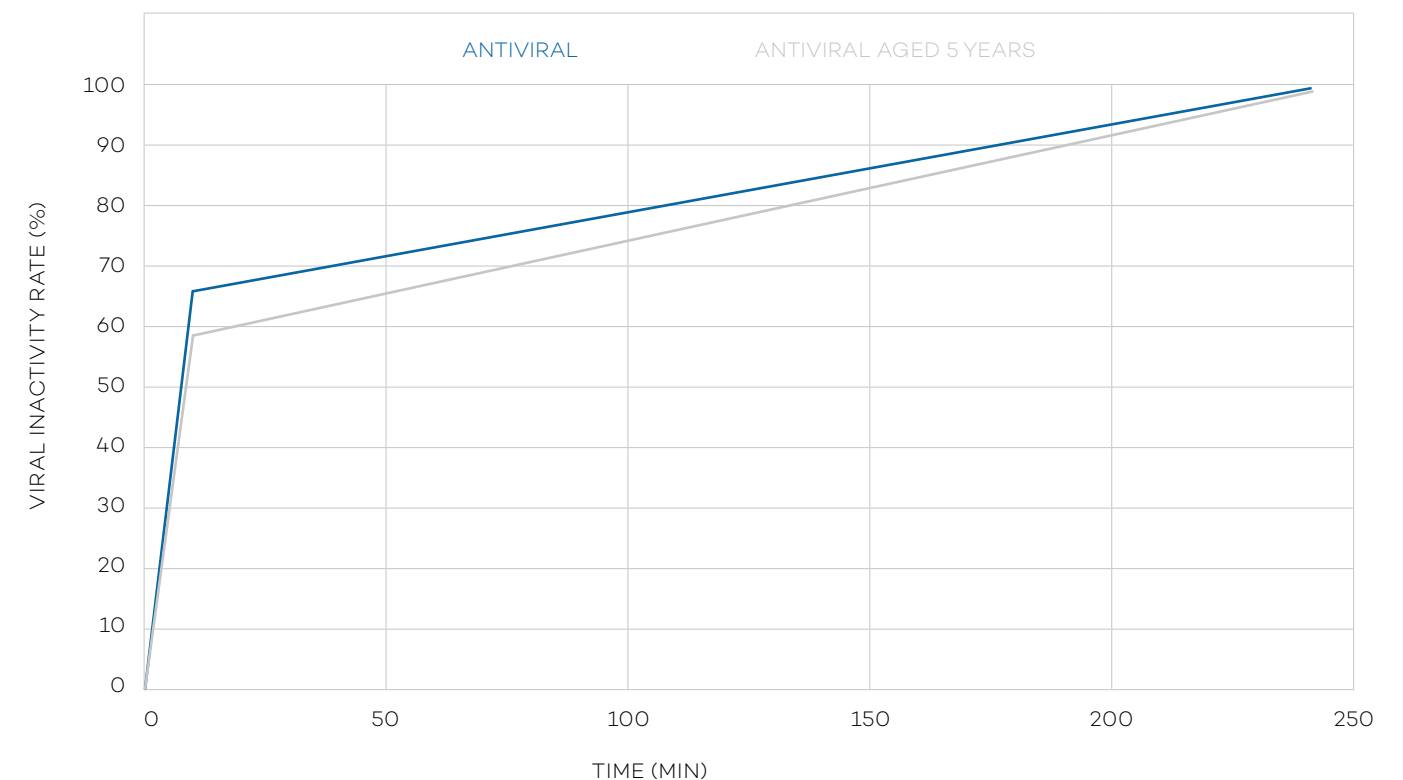

Examples of virus: SARS-CoV 2, Influenza, H1N1, HIV, herpes, etc...

Standard: ISO 21702:2019

This new product ANTIVIRAL has been tested under the ISO 21702:2019 for the measurement of antiviral activity on plastics and other non-porous surfaces. The test was performed by the independent Medical and Industrial Biotechnology Laboratory.

The product was tested against the virus SARS-CoV-2 and shows a high viral inactivity rate over 65% in 10 minutes and over 98% after 4 hours.

Tests were carried out in new and aged laminates. Both show high viral inactivation.

Under the same standard ISO 21702:2019 was also tested the toxicity for human cells (CaCo2), **showing the non-cytotoxicity of the product.**

To assure the **Food Safe Contact** behaviour of the ANTIVIRAL Laminates and Compacts, the product has been tested under the EN 13130-1:2004 for the specific migration and under the standard EN 1186-1:2002 for the global migration.

The ANTIVIRAL product comply with both standards.

The laminate **surface is also antibacterial**, tested under the standard ISO 22196:2001 and validated accordingly to Japanese regulation JIS Z 2801.

ANTIVIRAL HPL & CGS by Surforma is ideally suited for residential and public spaces in a variety of applications including furniture, interior fittings and construction for the sectors of education, hospital and healthcare, sports, hotels and restaurants, offices, shops, transportation and much more.

Surforma offers a wide range of decorative HPL & CGS, which are capable of antiviral customization with the ultimate goal of satisfying the requirements from interior designers and architects.

The additive causes a visible micro sparkle effect on the surface, which enhances the decorative properties of the laminate and compact.
